

STONE AND POME FRUITS

FujiMite[®] XLO miticide/insecticide can be applied to pome and stone fruit for fast knockdown of mites. FujiMite XLO also provides control of leafhoppers, mealybugs, and pear psylla.

Key Benefits

- New, low-odor formulation
- Active on all motile stages of mites - larvae, nymphs, and adults and contact activity on existing eggs
- Fast knockdown of mites
- Long-lasting control by inhibiting molting of immatures
- Unique mode-of-action stops mite feeding damage immediately and oviposition within hours after application
- Added benefit of leafhopper, mealybug, and pear psylla control

Key Mites Controlled

Two-spotted spider mite, European red mite, Pacific spider mite, Pear rust mite

Use Recommendations

- 2 pints/acre
- Apply by ground (minimum spray volume)
 - Pome fruit: 100 gpa
 - Stone fruit: 80 gpa
- Application speed for optimal coverage is LESS than 2 mph.

Use Information

- FujiMite XLO is a contact miticide. Proper application coverage is important for maximizing mite control.
- Reentry interval – 12 hours
- Preharvest interval
 - Pome fruit: 14 days
 - Stone fruit: 7 days
- Group 21A Insecticide
