

FOR FAST CONTROL OF TOUGH BROADLEAF WEEDS

PREPLANT BURNDOWN

Pour in the Power of ET[®]X herbicide to make your burndown program "BETTER, FASTER, STRONGER"

Benefits of Using ETX Herbicide

- ETX starts to control weeds immediately. Control or suppression of labeled weeds will be achieved normally within 7 days.
- ETX provides improved control on kochia, Russian Thistle, morningglory, pigweed, and other tough weeds compared to a glyphosate alone application.
- ETX offers another mode-of-action herbicide to preplant burndown programs to aid in resistance management.

Weed Control Programs

BURNDOWN

ETX @ 0.625 to 1.25 fl oz + Roundup[®] (glyphosate) + Crop Oil

ETX @ 0.625 to 1.25 fl oz + 2,4-D + Crop Oil

BURNDOWN + RESIDUAL PROGRAMS

ETX @ 0.625 to 1.25 fl oz + Roundup (glyphosate) + Residual Herbicide

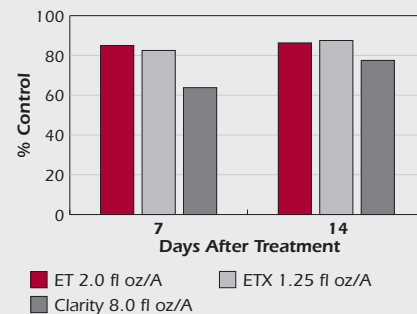

Use Recommendations

- Tankmix 0.625 to 1.25 fl oz ETX with glyphosate or paraquat.
- ETX is tankmix compatible with both preemergence herbicides and liquid fertilizer solutions.
- Adjuvant: ETX should always be applied in combination with a NIS, MSO, or COC adjuvant. Best results are obtained when ETX is used in combination with 1% to 2% COC v/v. Always consult the label of the tankmix partner to ensure adjuvant selection is appropriate for both products.
- ETX should be applied to actively growing small weeds. ETX is labeled for control or suppression of over 60 weed species that are less than 4 inches in height or 3 inches in rosette diameter.
- ETX is a contact herbicide and requires thorough coverage for optimum results. ETX must be applied with a minimum ground application volume of 10 gallons per acre. Higher application volumes provide improved results.

Application Window

- ETX has a zero day plantback for corn, cotton, soybeans, and wheat. It can be applied prior to planting, at planting, and post-plant (prior to crop emergence for corn, cotton, soybeans, and wheat).

ET vs ETX Marestalk Control Tillman Co., OK

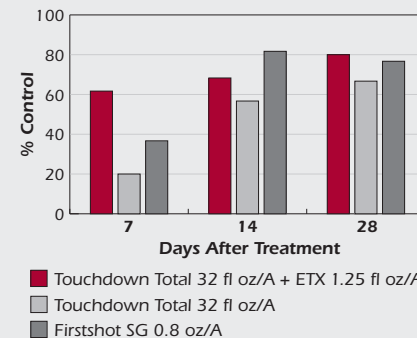

Burndown application treatments; Applied at 10 gpa
Treatments included Roundup PowerMax
32 fl oz/A + AMS (8.5 lb/100 gal)
Shane Osborne, OSO, 2013

Kochia Control* Lubbock, TX

Russian Thistle Control* Lubbock, TX

* Burndown application; 2 inch Kochia and Russian Thistle
Treatments applied at 10 gpa
Treatments included COC @ 12.8 fl oz/A
