

For Superior Control of *Rhizoctonia solani*

MONCUT[®] fungicide provides reliable, effective control of seed and soil-borne potato diseases with extended residual activity. The active ingredient in MONCUT, flutolanil, provides protection to the seed-piece and tuber set to allow the seed to reach its yield and quality potential, even under the most severe disease pressure situations.

Key Benefits

- Reliable, effective fungicide that provides superior disease management in potatoes while preventing early infection of developing roots
- Extended residual disease control
- Provides both curative and preventative activity which stops disease progress and prevents future infections
- Systemic activity, providing protection throughout the plant and tuber set
- Provides added suppression of powdery scab
- Excellent fit in resistance management program
- Excellent yield and quality results

Use Recommendations

- Use Rate - 0.71 to 1.1 lbs of product (0.50 to 0.77 lb a.i.) per acre.
- Use a minimum of 3 gallons of water per acre.
- Apply as an in-furrow spray. Direct spray uniformly over the seed pieces, bottom and walls of the seed furrow and soil that is used to cover the seed pieces in a 4 to 8 inch band prior to covering with soil. Use the higher rate where disease pressure is expected to be severe or if field has a history of *Rhizoctonia* infestation.
