

For Fast Knockdown of Mites

Miteus[®] miticide/insecticide is very effective on a wide range of mites, including perseas mite. The active ingredient in Miteus, *fenpyroximate*, causes rapid cessation of feeding and provides quick knockdown of mite populations.

Key Benefits

- Active on all motile stages of mites – larvae, nymphs, and adults as well as topical activity on eggs
- Stops pest feeding and oviposition within hours after application
- Nondisruptive to most beneficial insects
- Excellent rotational product for resistance management
- IRAC Group 21A – new mode of action in mite control in avocados

Key Pests Controlled

Mites, including perseas mite

Use Recommendations

- 2.0 pints per acre
- Minimum gallons water (GPA)
 - Ground: 95 gpa
 - Air: 50 gpa

Use Information

- Miteus is a contact miticide. Thorough spray coverage is critical for maximizing mite control.
- Use of a spray adjuvant will provide improved coverage.
- Reentry interval: 12 hours
- Preharvest interval: 1 day
