

Powerful Mite Control

Portal[®] XLO miticide/insecticide provides fast control of Banks grass and spider mites in corn. The active ingredient, *fenpyroximate*, is a unique mode of action that stops mite feeding immediately and oviposition within hours after application.

Key Benefits

- Contact activity on all motile stages of mites – larvae, nymphs, and adults as well as existing eggs
- Residual activity against immature mites
- Fast activity reduces duration of feeding and desiccation
- Labeled for both aerial and ground application
- IPM compatible – soft on beneficial insects, including predatory thrips
- 12-hour REI

Species Controlled

Banks Grass Mite, Two-Spotted Spider Mite

Use Recommendations

- Use Rate - 32 fl oz per acre
- Use a minimum of 10 gallons of water per acre when applying by ground and a minimum of 5 gallons of water per acre when applying by air.
- Apply with an adjuvant such as NIS, COC, or MSO.

Use Information

- Portal XLO should be applied to mite populations as soon as practical after reaching an economic threshold.
- Portal XLO is a contact miticide/insecticide so thorough coverage is critical for optimum control.
- A maximum of 2 applications or 64 fl oz may be applied in a single season.
- Allow 14 days between applications.
- 14-day PHI for forage, silage, stover, or grain.
